ABOUT ME

Data Scientist with 6 years of overall experience, including 3 years as a Data Scientist and prior experience in Tech Support. Expertise in Python, machine learning, and deep learning models with a strong background in data preprocessing, statistical analysis, and AI-driven solutions. Passionate about leveraging data science to derive actionable business insights. Hands-on experience in end-to-end data science projects, from data collection to model deployment. Skilled in problem-solving, model optimization, and working in collaborative environments.

EXPERIENCE

Centrepont Soft Tech Pvt Ltd as Data Scientist from March 2024 to Present

Infosys as Senior Technical Support Engineer from 2020 January to March 2024

- Developed and fine-tuned transformer-based Generative AI models like GPT and BERT for domain specific applications in retail and finance.
- Built end-to-end NLP pipelines for sentiment analysis, text summarization, and resume screening using advanced deep learning techniques.
- Designed and implemented AI-driven fraud detection systems by leveraging ensemble models, anomaly detection, and real-time transaction monitoring.
- Engineered large-scale machine learning pipelines, automating data ingestion, feature selection, and model retraining for production environments.
- Optimized sales forecasting models using ARIMA, Prophet, and deep learning-based time series analysis, improving demand prediction accuracy.
- Applied clustering techniques like K-Means and DBSCAN for customer segmentation, enabling personalized marketing and product recommendations.
- Developed reinforcement learning models for dynamic pricing strategies, enhancing revenue optimization for e-commerce platforms.
- Integrated machine learning models into scalable REST APIs using Flask and Fast API, ensuring seamless deployment in cloud-based applications.
- Built vision-based AI solutions using YOLOv5 and OpenCV for automated inventory tracking and shelf monitoring in retail stores.
- Led cloud-based AI model deployment using Docker, Kubernetes, and Azure ML, ensuring high availability, scalability, and cost optimization.

- Conducted hyperparameter tuning and optimization using Bayesian techniques, Auto ML frameworks,
- and genetic algorithms to enhance model efficiency.
- Designed automated CI/CD pipelines for ML workflows, reducing deployment time and ensuring
- continuous model improvement with real-time feedback.
- Provided software technical assistance and troubleshooting support, ensuring prompt resolution and
- customer satisfaction.
- Collaborated with cross-functional teams to diagnose and resolve software-related issues, improving operational efficiency and minimizing downtime.

SKILLS

- **Programming Languages:** Python (NumPy, Pandas, Matplotlib, Scikit-learn, TensorFlow, PyTorch)
- **Machine Learning:** Decision Trees, Random Forest, XGBoost, Linear Regression, PCA, K-Means Clustering
- **Deep Learning:** CNNs, RNNs, LSTMs, Transformers
- **Generative AI:** GPT, BERT, LLM-based Chatbots, LLM, Text Generation Models, RAG
- **Data Analysis & Visualization:** SQL, Power BI,
- **Big Data & Cloud Technologies:** Azure, AWS, Databricks
- **Version Control & Deployment:** Git, Docker, Fast API, Flask

PROJECTS

1. Generative AI-Based Resume Screening System

Description:

- Developed an AI-powered resume screening system using GPT-4 to analyze job descriptions and
- match relevant resumes automatically, streamlining the recruitment process.
- Roles and Responsibilities:
- Extracted text data from resumes and job descriptions, performing text preprocessing and feature engineering.
- Implemented vector-based similarity using BERT embeddings to assess resume-job description
- relevance.
- Developed a custom GPT-based chatbot to provide real-time resume improvement feedback.
- Designed and optimized a fine-tuned LLM model to enhance the accuracy of resume screening.
- Deployed the system using Fast API and Docker for scalability and easy integration with HR
- Tools

Tools & Technologies used:

Python, OpenAI API, NLP (Spacy, NLTK), BERT, Fast API, Docker

2. Fraud Detection in Banking Transactions (Machine Learning)

Description:

Built a fraud detection model for a financial institution to identify suspicious transactions in real-time, reducing financial losses and improving security.

Roles and Responsibilities:

- Collected and cleaned millions of transactional records, ensuring high-quality input data.
- Designed and implemented Random Forest and XGBoost models, achieving over 95% accuracy in fraud detection.
- Used SMOTE (Synthetic Minority Over-sampling Technique) to address class imbalance and improve model generalization.
- Built a real-time fraud detection API using Flask, integrating with banking systems to flag fraudulent transactions.
- Implemented a risk scoring mechanism to rank suspicious activities and trigger alerts for further investigation.

Tools & Techniques:

Python, Scikit-learn, XGBoost, Pandas, SQL, Flask

3. Customer Sentiment Analysis for E-Commerce (AI)

Description:

Developed an NLP-based sentiment analysis system to classify customer feedback as positive, negative, or neutral, enhancing customer experience and business insights.

Roles and Responsibilities:

- Collected and preprocessed customer reviews from multiple e-commerce platforms (Amazon, Flipkart, eBay).
- Trained LSTM and BERT-based sentiment classification models, improving sentiment prediction accuracy to 90%.
- Applied Hugging Face Transformers for advanced text embedding and contextual understanding.
- Designed a Tableau dashboard to visualize sentiment trends and insights for business decision-making.
- Integrated real-time sentiment predictions into the customer feedback system, automating analysis for thousands of reviews daily.

Tools & Techniques:

Python, TensorFlow, BERT, LSTM, Hugging Face Transformers, Tableau

4. Sales Forecasting Using Time Series Analysis (Data Analytics)

Description:

- Built a predictive model to forecast monthly sales for a retail company, enabling better inventory management and sales strategy optimization.
- Roles and Responsibilities:
 - Analyzed historical sales data, identifying patterns, seasonality, and anomalies using EDA techniques.
 - Built ARIMA and Facebook Prophet models, achieving a 15% improvement in forecast accuracy.

- Integrated sales forecasting data with Power BI dashboards for real-time business decision-making.
- Recommended inventory adjustments based on demand forecasts, reducing stock wastage by 20%.
- Implemented automated reporting pipelines, providing weekly forecast updates to business stakeholders.

Tools & Techniques:

Python, Pandas, Prophet, ARIMA, Power BI

EDUCATION

Executive PG Certification in Data Science & AI – IIT Roorkee (2025)

Bachelor of Engineering (B.E) in Computer Science Sapthagiri College of Engineering, 2019
